PROFESSIONAL EXPERIENCE

Ecavo Agro Daily Pvt. Ltd. [🌐](#), AI Agent Development Intern

06/2026 – Present

Technologies: Python, Raspberry Pi, Arduino, OpenCV

Prayagraj, India

- Wrote Python and OpenCV code that watches products on a production line and flags basic quality problems in real time.
- Connected cameras, sensors, Raspberry Pi and Arduino boards to Python scripts to run machine actions automatically.
- Built features for the internal docks management app in Next.js, TypeScript and MongoDB (e.g., server-side search and filters for Wheat Logs).

IBM [🌐](#), Summer Intern (Full-Stack / AI)

06/2025 – 08/2025

Technologies: React 19, TypeScript, Convex, Gemini API, Clerk Auth, React Router v7

Prayagraj, India

- Built a resume editor in React 19 and Convex where form edits appear instantly in a live preview, with no polling.
- Added a Gemini API feature that drafts resume bullet points from a job title.
- Built PDF export and public share links, so a recruiter can open a resume from a unique URL without logging in.

United College of Engineering and Research [🌐](#), Machine Learning Intern (Applied NLP)

06/2024 – 09/2024

Technologies: XGBoost, Scikit-learn, Streamlit, Pandas / NumPy, NLTK Vercel (Python)

Prayagraj, India

- Built a review sentiment classifier on the Amazon Echo reviews dataset: text cleaning, CountVectorizer, MinMax scaling, XGBoost.
- Processed 100k+ rows in 10k-row Pandas chunks to avoid running out of memory.
- Deployed the saved model so predictions return in about 100–200 ms.

PROJECTS

AI Agent Builder [🌐](#), Next.js 15, TypeScript, OpenAI SDK, React Flow, Convex, Clerk, Arcjet

08/2025 – 02/2026

- Built a drag-and-drop editor in Next.js and React Flow where users connect nodes (tool calls, prompts, decision branches) to design an OpenAI agent workflow.
- Wrote the code that turns the saved node graph into a workflow that actually runs on the OpenAI SDK.
- Added Clerk login, Arcjet rate limiting and bot protection, and per-user access to workflows on a Convex backend.

AI Smart Traffic Navigator [🌐](#), YOLOv8, OpenCV, Python, Arduino, Streamlit

02/2026 – 04/2026

- Detect and count vehicles by type in video with YOLOv8 and OpenCV, then convert counts into a density score per lane using passenger car units (PCU).
- Set green-light time for each lane from density, waiting time and optical flow; emergency vehicles and pedestrians override the normal cycle.
- Run detection, signal logic and Arduino control in separate threads over PySerial; a Pygame simulator and a Streamlit dashboard show live status.

SKILLS

Languages: Python, TypeScript, JavaScript, Java

AI/ML: scikit-learn, XGBoost, YOLOv8, OpenCV, Pandas, NumPy, NLP, OpenAI API, Gemini API

Frameworks: React, Next.js, Node.js, FastAPI, REST APIs, Convex, React Flow, Clerk

DevOps & Tools: Docker, AWS (EC2/S3), Git, Vercel, Postman, MongoDB, Arcjet, Arduino, Raspberry Pi

EDUCATION

B.Tech, Computer Science & Engineering (AI/ML) | Dr. A.P.J. Abdul Kalam Technical

10/2023 – Present

University (AKTU), United College of Engineering and Research, Prayagraj

Prayagraj, India

CERTIFICATES

Machine Learning Specialization — DeepLearning.AI / Stanford (Coursera)

Oracle Cloud Infrastructure 2025 — Certified AI Foundations Associate

Full-Stack Web Development — freeCodeCamp
